```

If you experience this error, it is most likely due to having the wrong JDK.

Crunch-Platform requires you to have: jdk1.7.0_71

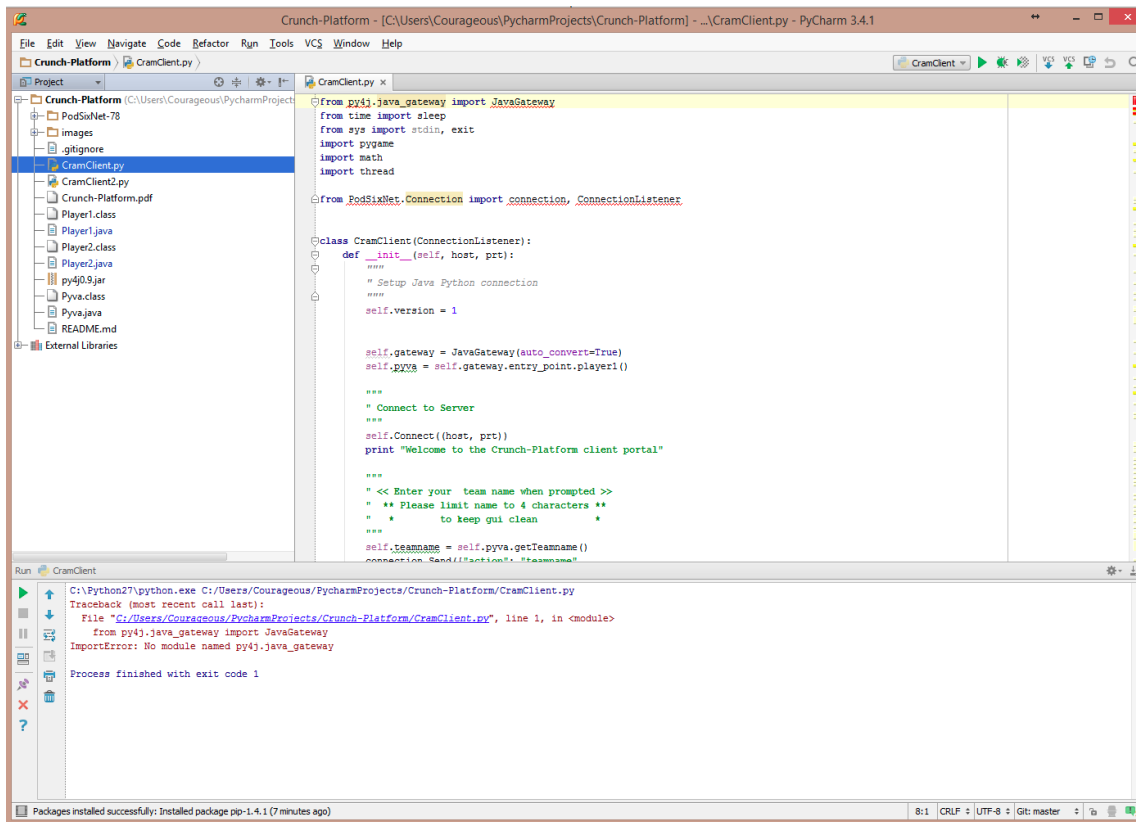

Download it from:

<http://www.oracle.com/technetwork/java/javase/downloads/jdk7-downloads-1880260.html>

Add it to your environment path.

Lastly, compile again.

Error: No module named py4j.java_gateway

This error is usually caused because PyCharm is detecting the py4j library.

A quick fix that sometimes works is to set your cursor on the import and press [Alt] + [Enter].

This sometimes works and PyCharm installs the required modules. If not you will need to select:

File > Settings in PyCharm and then go to Project:Crunch-Platform > Interpreters

From there you will need to manually import the module by clicking the 

and searching py4j and selecting

[Install Package]
